To Whom It May Concern:

Thank you for your inquiry concerning the recycled content of our PVC pipe products. LEED Version 4 is the current version of LEED.

LEED MR: Construction Waste Management

PVC is fully recyclable. Therefore, scrap produced during construction is diverted for landfills.

**LEED MR: Recycled Content and Regional Materials
According to LEED requirements, mechanical, electrical and plumbing
components count toward Regional Materials' credits.**

Atkore Plastic Pipe & Conduit Corporation produces pipe to a multitude of industry standards for applications such as irrigation, drain/waste, vent, sewer and drain, raw and potable water distribution. Rework material generated in the production of these products is used into our own processes.

The ASTM standards to which we produce our PVC products prohibit the use or incorporation of recycled material into our products. Clean rework material from our own process is acceptable, and the finished product may contain up to 5%.

MR Credit for regional materials is available within a 100-mile radius from the distribution and/or purchase location and includes all points of manufacture.

For your information, Atkore Plastic Pipe & Conduit Corporation manufactures PVC products for residential and commercial markets in their Eugene, OR; Louisville, KY; and Tampa, FL locations. We are unable to provide point of extraction for raw materials.

LEED MR Credit: Material Ingredients Optimization

Atkore PVC pipe is compliant with the European Union's REACH program. REACH certifications are available upon request.
